PAYTM SOUNDBOX

SARVAM INDIC AI

COGNEE GRAPH

n8n

Autonomous AI Business Partner for Every Paytm Merchant

Converting 10M+ Paytm Soundboxes into an autonomous retail operating system in 23 native Indian languages. Automatically audits supplier invoices, reclaims khata credit, hedges cashflow deficits, and executes smart restocking.

FOOTPRINT

30M+ Retailers (0 Capex)

STATUS

Live Working Prototype

The Silent Margin Crisis of 30 Million Merchants

Soundbox solved payments — but merchant back-offices bleed thousands monthly

The 3 Structural Margin Drains

- **Supplier Price Inflation:** Distributors inflate unit rates by 5–14% on fast-moving SKUs across dozens of weekly paper bills.
- **Trapped Khata Credit:** 22% of GMV locked in informal customer credit. 68% default rate due to social discomfort in asking neighbors.
- **Liquidity Clashes:** Daily retail UPI inflows clash with lumpy weekly distributor settlements, triggering bounced cheques and delivery freezes.

Existing Solutions & Fatal Flaws

Generic Bookkeeping Apps

Require manual entry. Merchants stop typing after 3 weeks. Zero hardware link.

FLAW

High manual friction

Generic English LLMs

Cannot parse Indian code-mixed speech (Hinglish). Hallucinate numbers. Zero memory.

FLAW

Language barrier & amnesia

Enterprise Desktop ERPs

Desktop-bound, expensive, and far too complex for single-counter Kirana owners.

FLAW

Desktop dependency

Qora: Three Autonomous Pillars for Paytm Soundbox

Converting a one-way speaker into a two-way conversational business partner

PILLAR 01 • VERNACULAR

Multilingual Voice Copilot

Powered by Sarvam AI:

- **Saaras v4 STT:** 23 languages with native code-mixed parsing (Hinglish, Tanglish).
- **Bulbul TTS:** 11-language voice output answering store queries out loud.
- **Zero Screen:** Just speak: *"Aaj kitna galla aaya?"* or *"Amul waale ko kitna dena hai?"*

METRIC

23 Languages

PILLAR 02 • MEMORY

Business Knowledge Graph

Powered by Cognition Graph RAG:

- **Entity Graph:** Builds persistent nodes for every customer, supplier, and SKU.
- **Contracted Rates:** Memorizes pricing agreements and flags historical creep.
- **Seasonal Memory:** Learns longitudinal trends (Navratri, Diwali demand spikes).

METRIC

800+ Nodes / Store

PILLAR 03 • ACTION

Self-Executing Workflows

Powered by n8n Orchestration:

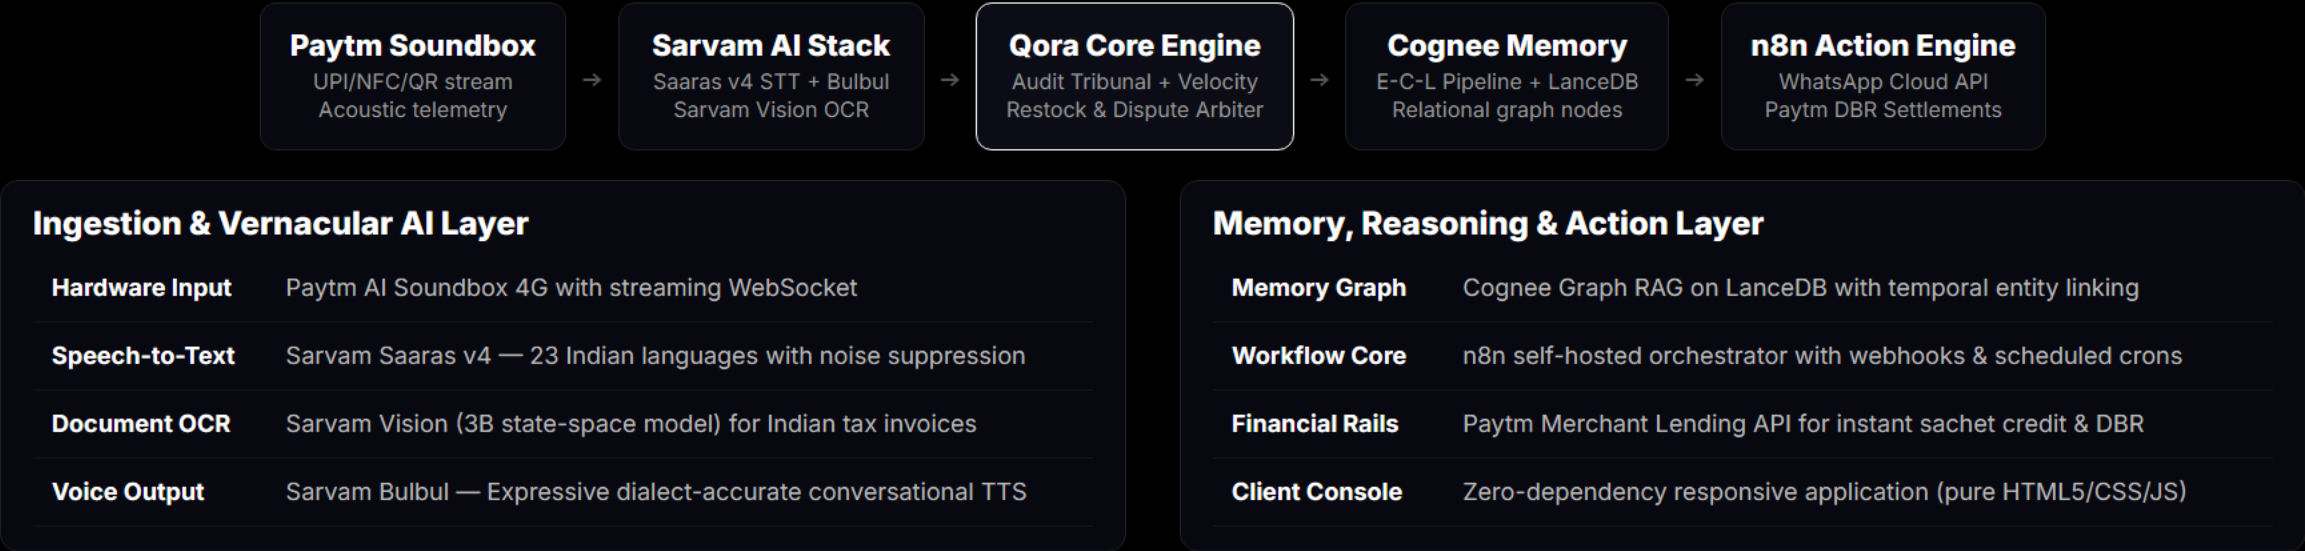

- **WhatsApp Invoice OCR:** Scans bills, extracts line items, verifies rates.
- **Khata Voice Reminders:** Schedules polite, localized voice debt collection.
- **Predictive Restock:** Detects sales velocity spikes and drafts purchase orders.

METRIC

7 Active Flows

End-to-End Cognitive Merchant Architecture

Deterministic financial safety boundaries wrapped around sovereign generative AI

Four Breakthrough Capabilities Built for Bharat

Proprietary mechanisms that elevate Qora far beyond standard conversational chatbots

INNOVATION 01 • ARBITRAGE

Federated Regional Price Oracle

Anonymously pools SKU prices and distributor GSTINs across neighborhood stores in the same pincode. Detects regional price discrimination (Store A billed ₹112 vs. ₹104 peer median) and arms retailers with collective bargaining proof.

INNOVATION 02 • HARDWARE SENSING

Ambient Acoustic Lost-Sale Telemetry

Zero-touch demand tracking via on-device phoneme spotting on Soundbox. Identifies *"Nahi bhaiyya, khatam ho gaya"* (Out of stock) without recording audio, logging lost revenue directly into Cognee to auto-adjust reorder levels.

INNOVATION 03 • NEGOTIATION

Multi-Agent Dispute Tribunal

Eliminates supplier friction. An **Auditor Agent** flags invoice price creep, an **Evidence Agent** cross-references POs and delivery receipts, and a **Negotiation Agent** dispatches WhatsApp claims to distributor desks for credit notes.

INNOVATION 04 • EMBEDDED FINTECH

Sachet Micro-Credit & DBR Sweeps

Underwrites instant working capital (₹25,000–₹75,000) using 30-day Soundbox transaction velocity with zero paperwork. Sweeps tiny 3%–5% micro-accruals (Daily Balance Recovery) from daily UPI settlements until repaid.

Win-Win Unit Economics for Merchant and Paytm

Turning the Soundbox from a monthly rental expense into a profit-generating counter asset

₹2,940

Monthly merchant savings

4.5 Hrs

Daily manual time saved

₹0 Rental

Via FMCG sponsored audio ads

1.2%/mo

Paytm loan distribution yield

Direct Merchant Bottom-Line Value

- **₹1,450 / month** recovered from supplier invoice overcharge claims.
- **₹890 / month** recovered in written-off khata debt via vernacular voice calls.
- **₹600 / month** saved in perishable stock write-offs via dynamic markdowns.
- **ROI exceeds 20x** relative to standard monthly device rental fees.

Sponsored Audio Co-Op Network

FMCG brands sponsor 2-sec audio tags post-payment: *"Paytm par ₹150 praapt hue. Tide par ₹5 bachat."* Merchants earn ₹0.30 per playback — 15 daily playbacks yield ₹135/month, **completely offsetting Soundbox rental.**

Paytm Strategic Value & Moat

- **Lending Origination Fees:** High-margin distribution yield from partner NBFCs (Tata Capital, Piramal) with automated daily DBR collection risk mitigation.
- **Zero Soundbox Churn:** Merchants running inventory, khata, and supplier relations on Qora will never switch to competing QR soundboxes.
- **Zero Hardware Capex:** Deployable over-the-air across existing 10M+ Soundbox devices via firmware WebSocket updates and WhatsApp APIs.

Live Working Prototype & 90-Day Deployment Plan

A verified architecture ready for immediate pilot deployment in Paytm's merchant ecosystem

90-Day Commercial Roadmap

- **Days 1 – 30 (Bengaluru Pilot):** Deploy companion WhatsApp bot to 500 Kirana stores in Koramangala & HSR Layout. Validate Sarvam Saaras v4 accuracy on Kannada/Hindi code-mixing.
- **Days 31 – 60 (Soundbox Firmware):** Integrate direct audio streaming with Paytm AI Soundbox devices. Activate automated Daily Balance Recovery (DBR) micro-credit sweeps.
- **Days 61 – 90 (Commercial Scale):** Roll out to top 10 retail hubs. Launch FMCG sponsored audio ad co-op network.

VERIFIED PRODUCTION ARTIFACTS

Fully Functional Live Prototype

Interactive merchant console featuring live Soundbox streaming simulation, 11-language Sarvam copilot interaction, automated invoice dispute modal, and 7-day cashflow forecast.
